

Brief Note on the 2003 (EFY)* GDP Estimates series

The major results of the 2003 GDP estimates

A. Gross Domestic Product

The economic growth (GDP at constant basic price) for 2003 EFY is estimated to be 11.4 %. As per the estimates, annual growth rates of the major sectors, i.e. Agriculture, industry and service were 9.0 %, 15.0 % and 12.5%; respectively and their shares out of the total GDP were about 41%, 13.4% and 45.6 %, respectively.

Over the last eight consecutive years; i.e. during 1996-2003 EFY the economy has registered rapid growth. Accordingly, in this period the annual average growth rate of GDP was 11.4 %. The agriculture, industry and service sectors' annual average growth was 10.2 %, 10.8 % and 12.9 %; respectively. In this Period a slight structural change is observed in the economy. The agricultural sector's share of GDP is decreasing and that of service sector is increasing. The industry sector's share is more or less constant except in the last budget year where higher growth is registered (Table 4C). In 2003, the GDP deflator (annual percentage change) has risen to 20.2%.

B. Expenditure on Gross Domestic Product

As per the estimate in 2003 EFY;

1. Consumption has registered about 91.2% of GDP of which the share of Government is 8.1% and the remaining balance (83.1%) is attributed to the Private final consumption.
2. Rate of Investment has reached 25.5% of GDP and has registered 30.3 % annual average growth over the last eight years.
3. Domestic saving has been 8.8% of GDP
4. Export has been 16.8% of GDP and has registered 32.1 % annual average growth over the last eight years.
5. Import has been 31.8% of GDP and has registered 30.1 % annual average growth over the last eight years.

The details are shown in the tables attached.

* "EFY" : "Ethiopian Fiscal Year" –which is from *Hamle-1* to *Sene-30*
